Abstract (en)

[origin: WO2012016741A1] The invention relates to a magnet valve (1) comprising a magnet armature (2) that is operatively connected to a sealing element (3) of the magnet valve (1) in order to displace said element and comprising at least one flow path (18) via which fluid chambers (16, 17) that lie on opposing faces of the magnet armature (2) can be connected or are connected in a fluidic manner. At least one damping element (19) is arranged in the magnet valve (1) in a displaceable manner in the axial direction, said damping element protruding into the flow path (18) at least in some regions.
