Abstract (en)

[origin: WO2012018310A1] Title: Process for the production of highly pure dicyclohexylamine from by-products resulting from the production of cyclohexylamine. Process for the production of highly pure dicyclohexylamine during the production of cyclohexylamine from aniline in a liquid phase on ruthenium catalyst on the aluminium carrier or coal consists in that the concentrated dicyclohexylamine obtained by a multiple rectification of the reaction mixture is again catalytically hydrogenated on the metal Ru, Pd, Pt or Rh catalyst on the carrier, at the temperature between 80 and 240°C and pressure between 0.1 and 9.0 MPa, in the same or in other hydrogenation device, whereby above 99.0% w/w concentrated dicyclohexylamine is obtained.
