Abstract (en)
[origin: WO2012017420A2] A portable electronic device is disclosed, this portable electronic device requiring a first type of energy, in particular electrical energy, to operate. The device comprises: at least one transducer which is suitable for converting between at least one second type of energy and the first type of energy, and which is required for at least one intended function of the device. In this case, the at least one transducer is suitable for converting energy of the second type into energy of the first type and outputting this energy in a charging mode, and the energy of a first type which is output by the at least one transducer in the charging mode can be supplied to the device in order to supply it with energy.
