Abstract (en)

[origin: EP2601855A1] The clasp (1) has a link (12) hinged by an end to a bracelet strand (10) and another end to another link (14). The latter link is hinged in turn to a cover (2) of the clasp. A folding system (4) is moved between a position, in which the links are superposed on each other inside the cover, and another position in which the links are unfolded. The former link is folded down on the latter link in the former position of the folding system. The former link includes two elastic locking points (22, 24) for fixing the former link in the cover of the clasp. The folding system is used for locking the clasp or adjusting length of a bracelet or belt.
