Abstract (en)

[origin: EP2602551A1] The fire system has housing (2) that is symmetrical with respect to side walls (10) in the central portion (3) of housing. A drive unit is provided at the side walls of central section in housing, to drive valve provided in the transitional area of combustion chamber (5). A coupling element (11) of the driving unit is protruded on both sides beyond the side walls of the central portion in housing. One end pulled out or side attachable and prepared mounting elements are arranged on the side walls to enable mounting of the drive unit at both sides of the central portion of housing.
