Abstract (en)
[origin: WO2012019920A1] The invention relates to a parking facility (10), comprising a plurality of parking spaces (26) for motor vehicles (30), wherein said parking spaces (26) are arranged adjacent to one another and/or above one another and each define a parking position for a motor vehicle (30), a transfer zone (84) which defines a transfer position for the motor vehicle (30) for transferring the motor vehicle (30) from the user to the parking facility (10) and vice versa, a transport device (36) for transporting the motor vehicle (30) between the transfer position and a parking position, a control device (42) for actuating the transport device (36) and an operating device (42) for the user which is operatively connected to the control device (42). In order to provide such a parking facility which enables speedy storage and removal of a motor vehicle with the most space-saving design possible of the transfer zone, according to the invention the control device (42) actuates the transport device (36) such that said transport device transports the motor vehicle (30) from a parking position to a mode change position located on the transport path from the parking position to the transfer position and vice versa in automatic mode, and the transport device (36) transports the motor vehicle (30) from the mode change position to the transfer position and vice versa in deadman mode when the operating device (42) is operated by the user.
