Abstract (en)

[origin: WO2012020081A1] An illumination arrangement has a lamp (10) with a plurality of light sources (11), which emit light in each case of a different colour, and a control unit (12) for operating the light sources (11), wherein the control unit (12) is configured to change the spectral composition of the light emitted with substantially unchanged colour locus and/or unchanged colour temperature, once a user has fixed a desired colour locus and/or colour temperature for the light emission.
