Abstract (en)  
A mattress for a baby or infant, comprising: a base section (4) (preferably having a recess), and at least a first insert (16), the first insert having an anatomically shaped surface for receiving the head of the baby or infant; wherein said first insert (16) is positionable at multiple positions along the length of the base section, preferably within the recess, whereby at each position said anatomically shaped surface is disposed at a different distance from a foot end of the base section. Preferably, the base section (4) has a first upper surface portion (24) for supporting the body of the baby or infant, disposed at or near the foot end of the base section. Preferably, an elongate axial recess is defined between said first upper surface portion (24) and a head end of said base section (4), opposite said foot end, the recess being shaped and dimensioned for receiving two or more inserts (16,18). Preferably, the further upper surface portions are substantially coplanar, when positioned in said recess, with a first upper surface portion (24) on said base section (4). The first insert (16) may be positionable adjacent the first upper surface portion or axially separated from the first upper surface portion (24) by said second insert (18), thus providing an upper support surface of variable length throughout the period of growth of the baby or infant.
