Abstract (en)

[origin: EP2604345A1] The equipment (1) has a separator (5) whose output is connected to an inlet of a compression mill (3). The separator is supplied with gas. A gas inlet (7) is located at a level of the compression mill, where the gas from the gas inlet passes through the compression mill and the separator. Another gas inlet (8) is located at a level of the separator, where the gas from the latter gas inlet passes only through the separator and the gas from the latter gas inlet mixes with the gas from the former gas inlet after passing through the separator. Independent claims are also included for the following: (1) a method for crushing a rough material in a crushing installation (2) a method for manufacturing a hydraulic binder (3) a hydraulic binder.
