Abstract (en)

The invention relates to a system (1) for treating the detergent solution used in a washing or rinsing plant for containers, the system comprising first and second treatment means of the detergent solution; first and second means (31L, 32L) for detecting and transmitting a first quantity relative to the flow of detergent solution to be treated, respectively upstream and downstream of said first treatment means (3); first and second means for detecting and transmitting a second quantity relative to the flow of detergent solution to be treated, upstream and downstream of the second treatment means (4); a control unit (U) programmed to manage the activation of the treatment system (1) and the starting of the operations of washing and recovery of the filtering functionality of said first and second treatment means (3, 4) as a function of the measured values of the quantities relative to the flow of solution to be treated.
