Abstract (en)

[origin: EP2604735A1] A method is described for controlling the spin step of a washing or washing/drying appliance, said appliance comprising a motor that rotates a drum adapted to contain a load, said spin step comprising one or more drum revolution speeds, said method comprising a check of the unbalanced condition of said load, based on a comparison between the instantaneous phase angle value and one or more threshold values, said unbalanced condition being verified in under-threshold conditions.
