Abstract (en)

[origin: EP2604761A1] The closet has rinse water supply units (5) led into an inlet opening (7) in a ceramic water closet bowl. The rinse water supply units and the inlet opening are formed such that a rotary movement is operated in the bowl. A bowl inner mold exhibits an asymmetric shape related to a vertical center plane. The bowl inner mold defines a flow trajectory for rinse water. The flow trajectory on a side of the center plane is deeper than on another side of the center plane so that rotary rinse water movement overlays a bowl-inner mold-conditional downward movement.
