Abstract (en)

[origin: EP2604775A1] The panel has a flat shuttering front face (AV) in which a spacer opening (2) is formed, and a back face (AR) on which a guiding device (5) is mounted, where the device guides a spacer rod (1) through the spacer opening. The device comprises a bearing support i.e. support plate (51), adapted to be in contact with a clamping nut (3) locking a position of the rod in the spacer opening. The device comprises a displacement unit for displacing the support plate with respect to the front face of the panel. The displacement unit moves the support plate between locking and release positions. An independent claim is also included for a method for withdrawing a spacer rod mounted between two opposite form panels.
