Abstract (en)

[origin: EP2604778A1] The wall (1) has six wall elements (11-16) held by two carriages supported in a head rail (2). A front head fitting is mounted at upper side of front wall element (16). An end head fitting is mounted at upper side of end wall element (11). The head fittings have levers connected to rotor shaft and holding shaft respectively. The head rail has a rotor channel coupled with rotor chamber. The rotor shaft is transferable within rotor channel if rotor shaft is aligned in parallel to rail, and is arrested in rotor chamber if rotor shaft is not aligned in parallel to rail.
