Abstract (en)
[origin: EP2605261A1] The device (1) has a signal transmitter (2) for transmitting control signals (S) to a remote signal receiver (8), which is associated with a switching element (4), and an electrical energy supply unit for supplying mains-independent power to a water line (10) connected to a power converter (12). The power converter converts the required kinetic and/or thermal energy from water into electrical energy for the operation of signal transmitter. The external signal receiver cooperates with the switching device for acoustic and/or optical signaling and for switching desired electrical load.
