Abstract (en)
[origin: WO2012023084A1] The present invention relates to a system useable in two modes, having the form of an upper body garment and comprising a central body (1; 19) suitable for covering the torso of a wearer, said central body (1; 19) being provided with an opening (2; 20) for the waist of the wearer that is reducible by way of a slidable string (11; 26), an opening (3; 21) for the neck of the wearer and a frontal opening (4; 22) extending between said opening (3; 21) for the neck and said opening (2; 20) for the waist, as well as with two sleeves (5; 23). The central body (1; 19) also comprises fastening means (7; 25) allowing substantial closure of said frontal opening (4; 22) and of said opening (3; 21) for the neck. The central body (1; 19) is further provided with a compartment (16; 34) containing a protective sheet (17; 35) suitable, in a system mode, to be extracted from said compartment (16; 34) and fixed in an extended disposition to an external side of said central body (1; 19).
