Abstract (en)
[origin: WO2012045650A2] The invention relates to a continuous flow steam generator (19) having a tank (20) comprising a heat transfer medium inlet (21) and a heat transfer medium outlet (22), wherein a heat transfer medium channel (23) is formed between the heat transfer medium inlet (21) and the heat transfer medium outlet (22), and a heat transfer medium flows in said channel, having steam generator tubes (24) disposed in the heat transfer medium channel (23), wherein a first portion (25) of the steam generator tubes (24) are designed as a system of superheater (26) and reheater (27) tubes, and a second portion (28) of the steam generator tubes (24) is designed as a system of preheating (29) and boiler tubes (30), and the first portion (25) is disposed upstream of the second portion (28) in the flow direction of the heat transfer medium. The invention further relates to a steam generator device (34) having a continuous flow steam generator (19) and a water separation system (33). The invention further relates to a solar thermal power plant.
