Abstract (en)

[origin: WO2012022861A1] The invention relates to a device for attaching a heating body (13) having bars (13a, 13b), comprising a bracket (1) provided with a cavity (2) and intended to be attached onto a wall. The device also comprises an attachment element (3) provided with an elongate body (4) inserted into the cavity (2), said elongate body (4) having, at one end thereof, a head (5) for attaching the heating element projecting from the bracket (1). A pin (6) enables the locking of the attachment element (3) to the bracket (1). According to a preferred embodiment, the attachment head (5) comprises a first part (10a) mounted on the elongate body (4), and a second removable part (10b) arranged to be coupled to the first part (10a) and form the attachment head (5) by positively locking the attachment head (5) onto the heating body (13).
