Abstract (en)

[origin: WO2012022581A1] The invention relates to a refrigeration device, in particular a domestic refrigeration device (1), comprising a heat-insulating inner container (4) forming a storage chamber (3) for goods to be cooled, having a rear wall, a door leaf (2) which is mounted on the refrigeration device for opening and closing an opening plane (O) of the storage chamber (3), and at least one shelf (8) for supporting the goods to be cooled, and at least two holding means (7) which are designed such that the shelf (8) can be accommodated in an extractable or insertable manner with the opposite sides thereof on the inner container (4) in the storage chamber (3), characterised in that the holding means (7.1) comprise carrier rails (9) which are designed such that the shelves (8) are to be supported in a front depth range which faces towards the opening plane (O) such that a rear depth range of a shelf (8) designed to be at least self-supporting in said area, faces the rear wall (28) of the inner container (4) protruding into an inserted position in the direction of the rear wall (28).
