Abstract (en)

The present finding concerns a press for applying heat transferable materials for personalising products. It is of the type comprising a base plate (1), on which the object to be personalised is arranged and an upper heated counter-plate, (2) both supported by means of a frame (3) and reciprocally compressed through an elastic member (4), manoeuvred by a handle (5). Such a press is characterised in that it allows the personalisation of two or more finished shoes simultaneously. ( fig. 1 ).
