Abstract (en)

[origin: EP2606802A2] The bucket (1) has a base (2) comprising a short base side and a long base side, and four-sided elements (3a-3c) arranged parallel, where the bucket is in cuboid shape. Four roller elements are attached to outer side of the base. The outer side of the base comprises a rotating bar at outer edge of the base, and the roller elements with front side are rotatably supported by the bar. A surface element is arranged in a direction of the short base side to form a deepest region of the bucket. Discharge openings (7a-7d) are provided in regions of clashing of the side elements.
