Abstract (en)

A training apparatus (2) for use on a training surface (16) is disclosed. The training apparatus includes a sport-projectile stopping member (4) and an elongated body (6) substantially transverse to the sport-projectile stopping member. The elongated body has a first section (8), a second section (12), and a transition section (10) between the first and second sections. A portion of the first section is positioned on the sport-projectile stopping member, and the first section is sized such that the sport-projection stopping member, the first section, the training surface and the transition section define an orifice (14) through which a sport-projectile can pass through.
