Abstract (en)

[origin: EP2607546A2] The present invention relates to a laundry machine having a drying function. The laundry machine having a drying function comprises: a rotatably installed drum; a heater that generates hot air, and a fan; a filter that filters the hot air; a sensor that senses a hot-airflow resistance generated by a flow channel through which the hot air flows; and a controller which determines whether or not the filter is clogged on the basis of the hot-airflow resistance sensed by the sensor.
