Abstract (en)

Assembly of a construction and a decay prevention plate. The construction comprises a first construction element having a first construction element contact surface and a second construction element having a second construction element contact surface. The plate is mounted between the first and second element. The plate has a first plate contact surface facing the first construction element contact surface and a second plate contact surface opposing said first plate contact surface and facing the second construction element contact surface. The plate contact surfaces have grooves opening to the respective plate contact surface and extending from an edge portion of the respective plate contact surface up to a further edge portion of said respective plate contact surface. Further, the first and second construction element contact surface both have a substantially vertical component relative to said horizontal plane, and the grooves comprise intersecting grooves.
