Abstract (en)

A pre-compressed gas or air arm, comprising a casing (1), to which a barrel (2) and a valve (12) are attached, suitable to control outflow of pre-compressed gas or air. Valve (12) is coaxially sliding along the axis (AA) of said barrel (2), and is operable to open by rocking means (13) through triggering of a striker (8) which in turn slides within a seat (7) having an axis (BB) parallel to axis (AA) of barrel (2). Opening of the valve relies on rocking means (13), substantially transverse with respect to said axes (AA) and (BB),
