Abstract (en)

[origin: EP2608185A1] The method involves detecting a parking space in surroundings of a vehicle (1). The surroundings of the vehicle with the parking space is displayed by graphical representation. Two parking modes are defined, where the parking modes differ by parking type in the parking space and/or gap type of the parking spaces. One of the parking modes is selected, and the type of the graphical representation of the surroundings with the parking space is taken place as a function of the selected parking mode. An independent claim is also included for a device for providing parking assistance in a vehicle.
