Abstract (en)

[origin: WO2012026936A1] A system, method and computer product that leverages location information for a positioning receiver (20, 48, 59) to alter elements in a virtual gaming world under influence from the real world elements (e.g., geographic position of wireless gaming device and geographic location of buildings and the like) to provide a unique gaming experience. The system, method and computer product is configured to be executed on a wireless gaming device (12) to be operable in a first mode wherein one or more features of the location based software product is dependent on a geographical location of the wireless gaming device; and operates in a second mode wherein the one or more features of the location based game system are static. Another embodiment relates to a method providing a virtual reward for playing a location-based game when a real-world product and/or service is purchased. Another embodiment relates to providing a real world reward based on performance of the location-based game.
