Abstract (en)
[origin: CA2808273A1] The invention relates to a rivet setting tool comprising a holding element (5) for holding a blind rivet (2, 3) before being set by the tool. Said holding element (5) comprises a central, cylindrical passage, the diameter thereof being slightly bigger than the diameter of the rivet pin. At least two, preferably three clamping jaws (10), which are introduced into radial slots (7) so that they can be displaced in a radial and axial manner, interact on the rivet pins. The width of the slots is smaller than the diameter of the rivet pin.
