Abstract (en)
[origin: WO2012025127A1] Performing sanding works on wall surfaces and ceiling surfaces with sanding tools (32), occur frequently attrition of the personnel who perform the work due to the fact that the person, simultaneously with the performance of the work where the sanding tool shall be controlled, also have to carry the sanding tool, and that this work often is performed in ergonomically awkward postures. Solving this problem there is provided a wheel borne telescope stand (2) comprising a telescope column (12) with an outer tube (14) and an inside this arranged displaceable tube (16) the free end of which comprises a pivotally -and tilt- able mounted hinge bracket (30), in which a giraffe sander (32) can be secured. The displaceable tube (16) is retained in a given position by a fall lock (18), downward displacements are damped by a fall damper (70) located inside the telescope tube. The telescope stand (2) comprises also a wall sander- and parking bracket (54) arranged lockable displaceable on the outside tube (14) at a fall lock (62). The advantage by the telescope stand (2) is that it allows work with the sanding/sanding tool in optional altitudes, without the operator needs to use energy to carry the sanding tool, and thus can concentrate on controlling it, which leads to better working results.
