Abstract (en)
[origin: WO2012037919A2] The invention relates to a device for fastening a drill stand (1) for a drilling machine to a building (2) or building part, comprising a clamping apparatus (3) and a contact part (4), wherein the clamping apparatus (3) acts on the building (2) or building part in the operating state, wherein in the operating state the contact part (4) contacts the building (2) or building part and is used to fasten the drill stand (1) and wherein the clamping apparatus (3) and the contact part (4) are connected to each other in the operating state. The invention aims to provide a device having improved stability, in that the contact part (4) comprises a frame construction (5) and an accommodating plate (6), in that a further clamping apparatus (7) is provided, and in that both clamping apparatuses (3, 7) are connected to the frame construction (5) in the operating state.
