Abstract (en)
[origin: WO2012025328A2] The invention relates to a hand-operated machine tool device, in particular for an angle grinder, comprising: a housing region (12a-12f) which is at least substantially rod-shaped and, in operation, is used as a main gripping element; and at least one operating element (14a-14f) which extends in the housing region (12a-12f) in a main extension direction (16a-16f) of the housing region (12a-12f). According to the invention, the hand-operated machine tool device has at least one mounting (18a-18f) which supports at least one operating face (20a-20f) of the operating element (14a-14f) such that it can pivot about at least one axis (22a-22f) aligned at least substantially parallel to the main extension direction (16a-16f).
