Abstract (en)
A locking clip (1, 101, 201) is adapted to hold a retaining element (2, 102, 202), said locking clip (1, 101, 201) comprises a base (15, 115, 215) having a direction of extension from a rear end portion (31, 131, 231) to an opposite front end portion (30, 130, 230). A locking means (14, 114, 214) is movable relative to a holding means (5, 105, 205) between a closed position for holding said retaining element (2, 102, 202) and an open position. An actuator (24, 124, 224) connected to said locking means (14, 114, 214) is movable perpendicularly to said direction of extension and in parallel with or substantially in parallel with said base (15, 115, 215), thereby moving said locking means (14, 114, 214) from said closed position to said open position. The invention also relates to a locking arrangement comprising such a locking clip and a retaining element.
