Abstract (en)  
The device has a flexible web e.g. Trempo (RTM: Plain or perforated Barrisol sheet), including a periphery of eyelets (4) that is intended to cooperate with a stringer (7). Another flexible web is arranged with a harpoon that is intended to cooperate with another stringer, where the former flexible web and the latter flexible web are arranged in an approximately parallel manner. An insulation layer e.g. varnish layer, is intended to be posed on a surface and/or in front of an asbestos structure. The former web includes a non-extensible central part (5).

Abstract (fr)  
La présente invention concerne un dispositif (1) permettant de confiner une structure (22) en amiante comprenant successivement : - une nappe (2) comprenant à sa périphérie des oeilletons (4) destinés à coopérer avec une lisse (7), et - une nappe souple (3) comprenant à sa périphérie un harpon (20) destiné à coopérer avec une lisse (14), dans lequel les deux nappes sont sensiblement parallèles.
