Abstract (en)

Auxiliary element for loading and unloading an inland-waterway vessel with a deck gangway and a side coaming which has an upper edge, wherein the auxiliary element comprises a platform which comprises on a first side one or more protrusions with which the platform can engage on the upper edge, and wherein the platform comprises on a second side opposite the first side a support which is provided so as to support on the gangway when the platform engages on the upper edge such that the platform can be placed substantially horizontally on the edge of the vessel.
