Abstract (en)

[origin: EP2610191A1] A distributor device (11) is arranged in a fixed position below a vacuum drum (14), which is rotatable about a vertical axis (A); the distributor device (11) is connectable to vacuum and/or pressure sources and has an upper body (49) defining at least two concentric circular grooves (55), which are continuous and house a plurality of blocks (58), so as to form arc-shaped groove portions (60) communicating with at least some of the inlets (39) and open at the top for communicating, in use, with passages (15) of the vacuum drum (14); the angular positions of the blocks (58) are adjustable in the circular grooves (55) to allow length adjustment and/or position adjustment of the arc-shaped groove portions (60).
