Abstract (en)

[origin: WO2012028232A1] The invention relates to a device for treating barrel-like containers (1) which each comprise a container fitting, said device comprising a rotor (15) that can be driven in a rotational manner about a rotor axis, several container receptacles (16) formed on the circumference of the rotor, to which the containers to be treated are supplied on a container feed (23, 25) and from which the treated containers are discharged on a container discharge (24, 26), further comprising treatment heads (21) that can be coupled to the container fittings for treating the containers, and hold-down devices (27) for clamping the containers at least during treatment at the respective container receptacle.
