Abstract (en)

[origin: WO2012028630A1] The invention relates to a process for producing curved glazing shapes using an expert system comprising a computerized database including the determination of the shapes as a function of the spatial distribution of the temperatures required for the conversion from flat glass sheets, for a set of tools that can be used, in which process the starting geometric data relating to the initially proposed glazing are introduced, the treatment leading to the spatial distribution of temperature and to a first resulting shape, from which the differences with the geometric initial data are determined in order to establish new data that is used as a basis for reiteration of the process until the shape closest to the initial data is obtained according to the tolerances chosen previously.
