Abstract (en)
[origin: WO2012028474A2] The invention relates to a refrigerator, in particular domestic refrigerator, having a series of condensation-water channels (17) which are arranged one above the other, are intended for collecting and evaporating condensation water which forms in the refrigerating chamber (16) of the refrigerator, and of which at least one condensation-water channel (17) is closed on both end sides (21) and has a channel wall (19) which extends in the longitudinal direction (x) of the channel and projects outwards from the refrigerator. According to the invention, the wall (19) of the condensation-water channel (17), this wall extending in the longitudinal direction (x) of the channel, has, over the course of its upper edge, an overflow edge (23), which is set back by a vertical offset (?h).
