Abstract (en)

[origin: WO2012028256A1] The invention relates to a system for storing electrical energy, comprising a plurality of storage cells having an operating voltage, wherein an electrical consumer and a switching element in series with the consumer are arranged in parallel with a storage cell, and wherein the switching element is closed when a threshold voltage is reached or exceeded, wherein the system comprises at least one module comprising a plurality of storage cells. The invention is characterized in that the system comprises a control device, which is designed to associate a temperature with individual storage cells and a module voltage with the module and to influence the threshold voltage of the individual storage cells depending on the associated temperature, whilst maintaining the module voltage.
