Abstract (en)
Dust collector (7) includes a substantially-cylindrical dust box body, and substantially-cylindrical primary filter (21) that is disposed in the dust box body, concentrically with respect to the dust box body. Moreover, the dust collector includes cyclone space (31) that is formed between the inner peripheral surface of the dust box body and the outer peripheral surface of primary filter (21), and substantially-cylindrical dust accumulation space (52) that is disposed below cyclone space (31). Furthermore, the dust collector includes umbrella-like extension part (22) that is disposed in a lower part of primary filter (21) and extends toward dust accumulation space (52), and substantially-cylindrical wall part (60) that is disposed inside extension part (22).
