Abstract (en)
[origin: WO2012031658A1] The invention relates to an adhesive closure piece (10), comprising a substrate part (12) and closure pieces (20a, 20b) of at least one type arranged upright thereon, said closure pieces each having a head part (14a, 14b), which, at a free end face thereof, has at least one contact surface (22a, 22b) for detachably adhering to another component by means of adhesive force, wherein said adhesive closure piece is characterized in that at least one connection section (16a, 16b) is present on the edge of at least one of the head parts (14a, 14b), wherein said connection section protrudes beyond the edge of said head part (14a, 14b) in at least one direction (30, 36) in such a way that the size of the contact surface (22a, 22b) of the corresponding head part (14a, 14b) is changed.
