Abstract (en)

[origin: WO2012031795A1] The invention relates to an object which can be authenticated and which comprises a substrate, said substrate containing at least one authenticating or identification pattern. Said pattern is covered by a cover for masking and exposing the pattern. The pattern is fluorescent and comprises organic fluorescent particles and/or inorganic fluorescent particles included in the substrate. The cover can be physically or structurally deformed in order to expose said pattern.
