Abstract (en)  
[origin: WO2012031578A2] The apparatus serves for metering products which are fed to a pack in a predefined quantity. The metering quantity is defined by virtue of at least one valve being opened and closed. Opening or closing positioning is predetermined by controllable or regulatable positioning of at least one blocking element arranged in a housing of the valve. At least one closing position of the blocking element is predetermined by at least one stop or a damper arranged within the valve housing.
