Abstract (en)  
[origin: WO2012032192A1] The invention relates to a mobile terminal comprising a screen designed to display graphical objects including window gadgets or widgets corresponding to respective applications, said widgets being the partial interfaces of the applications to which they correspond respectively. The mobile terminal determines (4.4) the dimensions of at least one widget of variable size and/or of at least one graphical representation of at least one widget as a function of at least one datum requesting at least one application to which at least one displayed widget corresponds. Subsequently, the mobile terminal updates (4.5) the display of the widgets as a function of the dimensions determined. Thus, the dimensions of the widgets and/or the graphical representations of the widgets change as requests are made for the applications to which they correspond.
