Abstract (en)

[origin: WO2012031768A1] The present invention relates to a method for producing an application which is capable of being executed on a digital terminal which has a touch-sensitive screen, wherein a code for the application is transferred, at least in part, from a server device to the digital terminal, wherein the transfer of the code for the application is initiated, at least in part, by user interaction, characterized in that the method comprises the following steps: - a model code which can be used for multiple types of the digital terminal is created for the application and - the code for the application is produced on the basis of the model code. In addition, the invention relates to an apparatus for producing an application which is capable of being executed on a digital terminal which has a touch-sensitive screen, and to the code for an application.
