Abstract (en)

[origin: US2012062781A1] On a camera, the lens board (1) and the imager holder (10) are connected to one another through linear actuators (31). This allows the lens plane (EO) resp. the image plane (EB) to pivot around selectable axes lying accordingly in said planes. As a result, it affords the possibility with a camera and for a selected scene plane to easily comply with the Scheimpflug principle.
