Abstract (en)

[origin: WO2012032004A1] The invention relates to a light-emitting element (1) with a substrate material (2), a light-emitting material (4), a dielectric layer (12) and with a front electrode (5) and a rear electrode (9), which induce a first electrical alternating field (18), wherein at least two electrodes (8) inducing a second electrical alternating field (19) are provided in the light-emitting material (4), as well as to a method for driving such a light-emitting element, wherein a second electrical alternating field (19) is induced in the light-emitting material (4), said second electrical alternating field being oriented at an angle to the first electrical alternating field (18).
