Abstract (en)
An electric vacuum cleaner includes a cleaner body, dust collector, and handle. The handle has an engaging section at an end, and the dust collector has a first target section for the engaging section. An engagement of the engaging section with the first target section allows the handle to be kept standing. The cleaner body has a second target section for the engaging section, and an engagement of the engaging section with the second target section allows the cleaner body to hold the dust collector. When the dust collector is mounted to the cleaner body with the handle standing, the engagement of the engaging section with the first target section is released, and the engaging section engages with the second target section.
