Abstract (en)
[origin: EP2614940A1] The processing device has a narrow surface- or profiled processing area (B) with a haul track (2), a top roll pressure (4) and a tool for narrow surface- or profiled processing. A lead-in area (A) is provided with another haul track (10) and two top roll pressures (11,12). Two processing units for processing two main sides of the work piece are provided in the area of the lead-in area. The former processing unit is provided between two top roll pressures of the lead-in area. The two top roll pressures and the haul track of the lead-in area are adjustable in height independent of one another. An independent claim is included for a method for processing of plate-shaped work pieces of wood materials, plastic or composite materials.
