Abstract (en)

[origin: EP2615233A2] The arrangement has a control arm (16) supported at a frame part (10) by two supports. One of the supports is located closer to a frame-side end (16a) of the control arm than the other support. The former support is formed by a holding device (28) V-scissors, of a frame part (10). The holding device is connected with the frame part independent of a rotary bearing (20). The holding device engages at the control arm and receives force, which is exerted on the control arm by a weight of a wing, in a rotational position of the control arm.
